MLS Property Search

Integration Report

PREPARED FOR LYL REALTY GROUP

March 2026

PREPARED BY AI ACROBATICS

SECTION 01

Executive Summary

Right now, when someone visits taurorealty.com, they can learn about your team and services — but they can't search for homes. That means they leave your site and go to Zillow, Redfin, or a competitor's website instead.

MLS integration changes that. It connects your website directly to Bright MLS — the same database you use every day to list and find properties. Once connected, visitors can search every active listing in Philadelphia right on your site.

> **What this means for your business:**
>
> **More leads.** Every visitor who searches for a home on your site is a potential client. Instead of losing them to Zillow, they stay on your website and reach out to you.
>
> **Better Google rankings.** Hundreds of new property pages with Philadelphia neighborhood keywords help your site show up in more searches.
>
> **A more professional look.** Home buyers expect to search listings on a brokerage website. This puts you on the same level as the big players.

This report explains how the integration works, what it costs, and what we need from you to get started. The bottom line: **for $49 per month, we can add live property search to your website within 4 weeks.**

SECTION 02

How It Works

Think of it like a pipeline. Listing data flows from Bright MLS to your website automatically, updating every 15 minutes. Your visitors always see the latest properties without you lifting a finger.

The Three Pieces

Bright MLS is the listing database you already use. It holds every active property listing in the Philadelphia region — over 100,000 subscribers share their listings through this system.

SimplyRETS is the connector. It pulls data from Bright MLS and translates it into a format your website can use. Think of it like a translator between the MLS and your website. It keeps the data fresh with automatic updates every 15 minutes.

Your website (taurorealty.com) displays the data in a beautiful, custom design that matches your brand. Visitors can search, filter, view photos, see details, and contact you to schedule a showing — all without leaving your site.

> **The key benefit:** Unlike plug-in tools that look generic and out of place, this approach gives you a fully custom property search that feels like a natural part of your website. Same colors, same fonts, same premium feel.

SECTION 03

What You'll Get

Here is everything that comes with the MLS integration, built directly into your Tauro website.

🔍 Live Property Search

Visitors can search all active listings in Philadelphia and surrounding areas. Results update automatically every 15 minutes.

🗺 Interactive Map

A full map view where buyers can zoom into neighborhoods, see listing pins, and click to view details.

🏠 Neighborhood Filters

Search by neighborhood, zip code, price range, bedrooms, bathrooms, property type, and more.

📱 Mobile-Friendly Listings

Every listing page looks great on phones, tablets, and desktops. Over 60% of home searches happen on mobile.

📅 Schedule a Showing

Every listing has a "Schedule a Showing" button that connects directly to your booking system. Turns browsers into leads.

⚡ Auto-Updating Data

New listings appear within 15 minutes. Sold and pending properties are removed automatically. No manual work needed.

Bonus: SEO power. Every property listing becomes its own page on your website. That means hundreds of new pages with location keywords like "3-bedroom home in Fishtown" or "townhouse in Rittenhouse Square" — all helping you rank higher on Google.

SECTION 04

Our Recommendation

We recommend using **SimplyRETS** as the data connector between Bright MLS and your website. Here's why.

Why SimplyRETS?

SimplyRETS is built for developers creating custom real estate websites. It gives us complete control over how listings look and feel on your site, while keeping costs low and setup simple.

There are three ways to add MLS listings to a website. Here's how they compare:

APPROACH	COST	CUSTOM DESIGN	SEO VALUE	SETUP TIME
Plug-in Widget IDX Broker, iframes	$60–99/mo	**None**	**None**	1–2 days
API Connector SimplyRETS — Recommended	**$49/mo**	Full	Full	2–4 weeks
Direct MLS Feed Build everything from scratch	$625/mo	**Full**	**Full**	6–8 weeks

Why Not the Other Options?

Plug-in widgets drop a generic search box onto your website that looks completely different from your brand. It can't be styled to match your midnight-and-gold design. Visitors notice the difference — it feels cheap. Plus, Google can't index the listings, so you get zero SEO benefit.

A direct MLS feed gives you maximum control, but it costs over $7,500 per year in MLS fees alone, plus weeks of extra development. That level of investment makes sense for a company like Zillow — but for a single brokerage, it's overkill.

> **SimplyRETS is the sweet spot.** Full design control, full SEO benefit, lowest cost, and your development is already covered under your current retainer.

SECTION 05

Compliance & Legal

Displaying MLS listings on a website comes with rules from both Bright MLS and the National Association of Realtors. **We handle all of this for you.**

Here's what needs to appear on every listing page, and how we'll make sure it's done right:

✓ **Listing Agent & Firm Credits**
Every listing shows the name of the listing agent and their brokerage, as required by MLS rules.

✓ **Bright MLS Attribution**
The Bright MLS logo and copyright notice appear on all listing pages, meeting their branding requirements.

✓ **Data Accuracy Disclaimers**
Standard disclaimers let visitors know the data comes from the MLS and should be verified independently.

✓ **"Last Updated" Timestamps**
Every listing shows when the data was last refreshed, so visitors know they're seeing current information.

✓ **Your Branding Comes First**
NAR rules require your company branding to be larger than any third-party logos. Your brand always leads.

✓ **Opt-Out Compliance**
Some sellers choose not to have their listing shown on IDX sites. Our system automatically respects those preferences.

You don't need to worry about any of this. We build all required disclaimers, credits, and notices directly into the website templates. They show up automatically on every listing page. If Bright MLS updates their rules, we update the templates.

SECTION 06

Timeline

From start to finish, we can have live property search on your website in about 4 weeks.

PHASE 1 — WEEK 1

Setup & Connection

We collect your Bright MLS credentials, set up the SimplyRETS account, and connect the data feed. While waiting for the connection to go live, we start building the search and listing page designs using sample data.

PHASE 2 — WEEKS 2–3

Build & Design

We build the property search page, individual listing pages, interactive map, filters, and "Schedule a Showing" buttons. Everything is styled to match your Tauro brand perfectly. We also add all required compliance elements.

PHASE 3 — WEEK 4

Launch & Quality Check

We test everything: data accuracy, search filters, mobile experience, page speed, and compliance. We verify that new listings appear within 15 minutes. Once everything checks out, we go live.

SECTION 07

Investment

$49/mo

SimplyRETS Data Feed

One-time setup fee: $99 (paid to SimplyRETS for the Bright MLS connection)
Development, design, and ongoing maintenance are **included in your current retainer**.

At $49 per month, SimplyRETS is the most affordable option — and the only one that gives you full design control and SEO benefits. It's **92% cheaper** than going directly to the MLS ($7,500/year).

SECTION 08

What We Need From You

To get started, we need a few items from you. Most of these you already have as a Bright MLS subscriber.

- ☐ **Bright MLS Subscriber ID** — Your unique ID in the Bright MLS system.
- ☐ **NRDS Number** — Your NAR member ID, found on your REALTOR membership card.
- ☐ **Brokerage Office Code** — LYL Realty Group's office code in Bright MLS.
- ☐ **IDX Authorization** — Authorize your website to display IDX data. We'll walk you through it.
- ☐ **Neighborhood Preferences** — Which Philadelphia neighborhoods and zip codes to focus on.

> **Don't have all of this ready?** No problem. We can help you track down each item. Most brokers get everything within a day or two.

SECTION 09

Next Steps

STEP 1

Give Us the Green Light

Let us know you'd like to move forward. We'll send a checklist for your MLS credentials.

STEP 2

Send Us Your MLS Info

Share your Bright MLS subscriber ID, NRDS number, and office code. We handle the rest.

STEP 3

We Build It

Over 3–4 weeks, we design and build your property search. You'll see progress along the way.

STEP 4

Go Live

Once you approve, we launch. Your site starts showing live MLS listings to every visitor.
